Job Description

Under supervision of the CSFS Nursery manager the container production supervisor will be responsible for all operations related to container plant production. Specifically the supervisor will be responsible for the management of the nursery's 18,000 sq.ft. of greenhouse space, including irrigation, operation of Wadsworth controllers, insect and disease identification and management and general maintenance and upgrades of the greenhouses. The supervisor will be responsible for the identification and stratification of seed for 40+ species of plants grown in containers with an emphasis on ecotypic plant production. Inventory and quality control of finished material stored in outdoor shade houses and careful attention to nursery budgets will also be the supervisor's responsibility. Additionally, the container production supervisor will participate in production planning with the nursery manager, grading, boxing and distribution of seedlings with the operations coordinator, and discussions regarding cost containment and future operations.

Employee Benefits:

Colorado State University (CSU) and the State of Colorado are committed to providing employees with a strong and competitive benefits package that supports you, your health, and your family.
