

3-year-old Damm Autofog Machine LVH 15NS

The Damm Autofog LVH-15NS is a large-capacity, automated chemical applicator designed for treating large greenhouse areas up to 30,000 square feet.

The "LVH" indicates it's the larger, low-volume model, and it uses a 15-liter tank and a stainless steel nozzle for corrosive chemicals.

We aren't able to utilize this fogger to its full potential because we have too many large plants, interior walls and shade cloth for it to be as effective as it could be.
